***Reasons for Allowance***

1. Claims 1-14, 16-17, 19-20, 23-24 are allowed as the prior art does not teach or suggest the applicant's invention. Independent claim 1 teaches a tape drive system. The distinguishing element of the claim is a pressure sensor comprising a plurality of pressure sensing elements positioned to sense a pressure gradient across the head assembly in a lateral direction perpendicular to a direction of tape travel.

Independent claim 12 teaches a method of operating a tape drive system. The distinguishing element of the claim is determining whether the pressure detected by the pressure sensor corresponds with the desired tape medium tension comprises calculating a tension in the tape medium based upon the pressure detected by the pressure sensor and acceleration of the head support detected by the accelerometer.

Independent claim 16 teaches a tape drive system. The distinguishing element of the claim is a pressure sensor comprising one or more pressure sensing elements, each pressure sensing element comprising a transducer for producing the signal representative of the pressure applied by the magnetic tape medium onto the pressure sensing assembly.

Independent claim 23 teaches a tape drive system. The distinguishing element of the claim is a motor controller coupled to the take-up reel motor, the supply reel motor, and the pressure sensor, the motor controller being configured to control the rotation of the take-up reel motor and the supply reel motor in response to changes in the pressure signal to maintain a desired tension in a tape medium passing between a take-up reel coupled to the take-up reel motor and a supply reel coupled to the supply reel motor.
